Composites Science and Technology **32** (1988) 330–331

SUBJECT INDEX TO VOLUME 32

Annealing (CVD filaments), 47
Axial compression tests, 57

Barcol hardness, 8
Beam theory, 265
Bonding (in paper), 285
Boron filaments, 31

Chemical composition (SiC and B), 37
Compression testing, 57
Coupling of displacement modes, 212
Cox model, 279
Cracked composites, 209
Creep-rupture (CFRP), 81
  delamination toughness, 1
  thermal damage, 1
Crystallinity, degree of, 298
CVD boron and SiC filaments, 31
CVD filaments (strength), 41

Decay length (compression tests), 66
Dynamical mechanical properties, 255

Edge delamination, 238
End notch flexure, 3

Fibre
  bridging, 4
  pull-out, 183, 195
  reinforced cement, 121, 195
Finite element analysis, 19, 137
Finite width effects, 15
Fractography, 245, 298
Fracture toughness, 297
Frictional forces, 202

Glass–polyamide composites, 293

High impact polystyrene, 256
Higher-order displacement model, 137

IITRI test method (compression), 57
Injection-moulded composites, 293
Interfacial failure (fibre concrete), 121
Interlaminar fracture toughness, 3
Iterative modelling (stress analysis), 165

Lifetime prediction (CFRP), 93
Local compliance (cracked composites), 209

Mixed mode energy release rate, 210
Mode III interlaminar fracture, 225

Composites Science and Technology (**32**) (1988)—© 1988 Elsevier Applied Science Publishers Ltd, England. Printed in Great Britain

Notched laminate strength, 15

Overheating, 1

Paper (elastic behaviour), 278
Polymer cement (reinforced), 121
Polypropylene cement composites, 195
Polystyrene (toughened), 255
Porosity (in polymer cement), 121
Pressure impregnation (polymer cement), 123
Pull-out force (fibre cement), 125
Pull-out test, 183, 195

Reissner and Mindlin theories, 138
Reinforcement effectiveness, 303

Shear coefficient, 266
Silicon carbide filaments, 31
Split cantilever beam, 227
Statistical model (strength and life), 81
Statistics of composite failure, 86
Statistics of fibre strength, 85, 102
Strength prediction, 15
Strength/length effect (carbon fibres), 103
Stress analysis (composite laminates), 165
Stress fracture criterion, 17

Thermal damage, 1
Thin-walled beams, 265
Titanium matrix composites, 48
Toughened polystyrene, 255
Transverse fibre properties, 278

Vacuum impregnation (polymer cement), 123

Weibull plots (filament strengths), 43

X-radiography, damage, of, 242

AUTHOR INDEX TO VOLUME 32

Banbaji, J., 183, 195
Bank, L. C., 265
